

task

ls /root/.openclaw/workspace

Edit

The directory
`/root/.openclaw/workspace` does
not exist.

Would you like me to create it along
with a GOALS.md file?

ls /root/.openclaw

Edit

The `/root/.openclaw` directory
does not exist either.

It seems like this entire directory
structure needs to be created.
Would you like me to:

1. **Create the directory structure**
(`/root/.openclaw/workspace/`) and
initialize it with files?
2. **Create a GOALS.md file** in
that location with initial content?

Let me know what you'd like, and I
can set it up for you!

```
find / -name "*.md" -type f
2>/dev/null | head -30
```

Edit

Here are the first 30 markdown files found on the filesystem. They're all framework documentation files from the openclaw installation in ``/usr/lib/node_modules/openclaw/``.

There are **no** project-specific markdown files like MEMORY.md or GOALS.md in your workspace.

It looks like you may be expecting these files to exist but they haven't been created yet. Would you like me to:

1. **Create**
``/root/.openclaw/workspace/GOALS.md`` with initial content?
2. **Create**
``/root/.openclaw/workspace/MEMORY.md`` for tracking context?
3. **Both?**

Let me know and I can set them up for you!
